

Report Summary

Based on the findings within this report, GeneTrait recommends closely reviewing the following

Medication Considerations

4 medications are indicated as high risk / low benefit for this patient, including Prozac, Lortab, and Oxyconton for genetic and drug-to-drug interactions. Consider alternatives in report.

Lifestyle Considerations

Based in current medications, alcohol should be avoided due to severe interaction potential. Refer to report.

Genetic Considerations

Due to patient's poor metabolizer status of CYP2D6, opiates should be avoided due to potential lack of efficacy. Refer to report.

Demographic Considerations

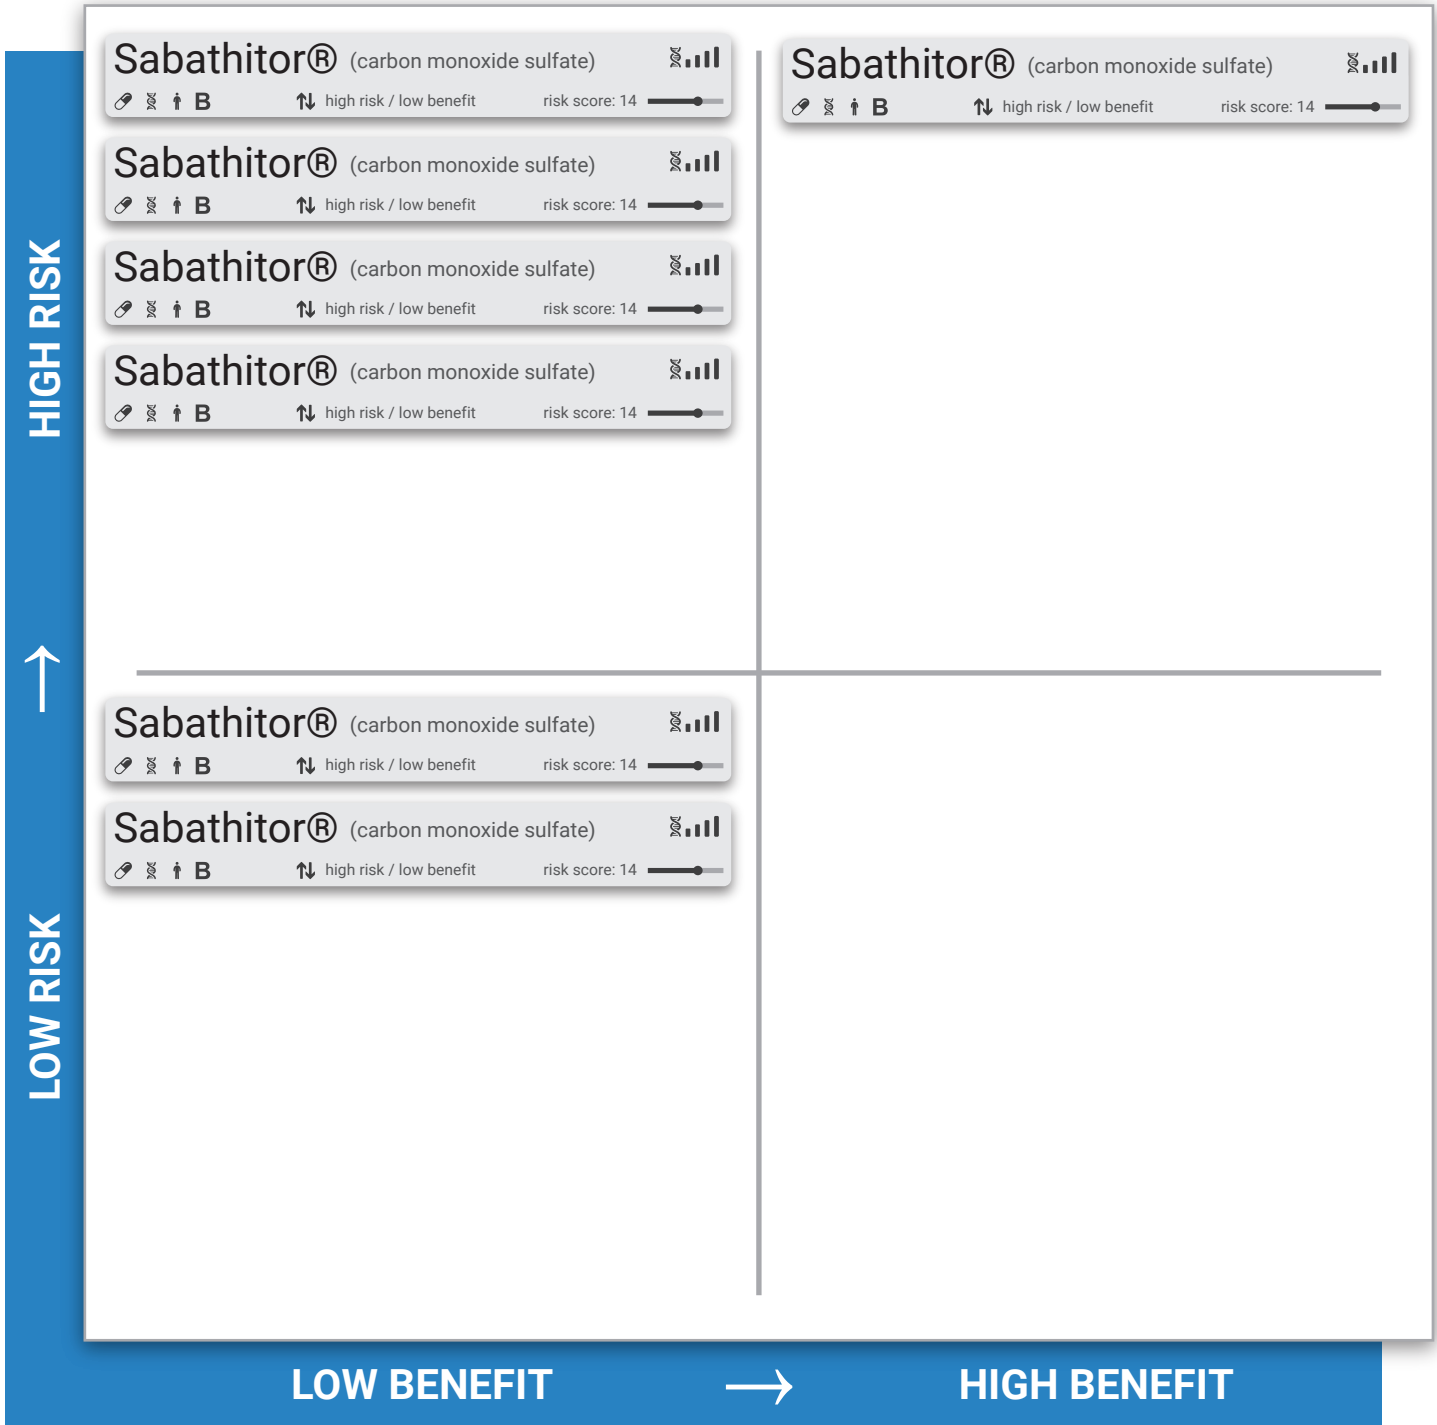

Due to patient's age, SSRIs should be avoided due to potential adverse reactions. Refer to report.

Legend:  Drug Interaction  Genetic Interaction  Lifestyle Interaction **B** Black Box Warning  Demographic Interaction  Genetic Confidence Level

Current Regimen Report

Depending on a combined risk and benefit assessment, each medication is classified in one of the four quadrants displayed below

Overall Risk Score: 112

Legend: Drug Interaction Genetic Interaction Lifestyle Interaction **B** Black Box Warning Demographic Interaction Genetic Confidence Level

For detailed conclusions and alternatives, see Regimen Summary on page 3.
